1 About this document

This document shows the necessary information to do these tasks on the Gas Fire Panorama 110-70 PF2:

- Installation
- Maintenance

This document refers to the Gas Fire Panorama 110-70 PF2 as 'the appliance'. This document is an essential part of your appliance. Read it carefully before you do work on the appliance. Keep it in a safe place.

The original instructions of the document are in English. All other language versions of the document are translations of the original instructions. It is not always possible to provide a detailed illustration of every single item of the equipment. The illustrations in this document show a typical setup. The illustrations are for instructional use only.

1.1 How to work with this document

- 1. Make yourself familiar with the structure and content of the document.
- 2. Read the safety chapter in detail.
- 3. Make sure that you understand all the instructions.
- 4. Do the procedures completely and in the given sequence.

1.2 Warnings and cautions used in this document

Warning

If you do not obey these instructions, there is a risk that can cause personal injury or death.

Caution

If you do not obey these instructions, there is a risk of damage to the equipment or to property.

Note

A note shows more information.

Symbol	Description
	Visual sign that there is a hazard
1	Visual sign that there is a notice

1.3 Related documentation

- Preparation manual
- · Installation and maintenance manual
- User manual
- Assembly instructions for concentric flue system

2 Description

2.1 Intended use

The appliance is intended for use in a completely sealed or mechanically ventilated house without extra ventilation and/or fume extraction to heat the room wherein it is installed. Do not use it for other purposes.

The appliance may only be used at a location that meets the requirements for the installation of the appliance. Refer to the preparation manual.

2.2 Installation options

The appliance has a Premium Fire (PF2) double burner.

- The appliance can be installed with 4 adjustable height legs.
- The appliance can be equipped with a convention case with 4 convection air outlet openings at the top of the appliance.
- The appliance can be installed with anti-reflective ceramic glass. Retrofit is possible. Contact your dealer for more information.
- In those cases the length of the concentric flue channel is longer than prescribed in the Preparation Manual, the appliance can be installed with the Opti-Vent system.
- The appliance can be installed with a WiFi box for operation with a mobile device. Retrofit is possible. Contact your dealer for more information.
- A mantel iron can be installed on the appliance. The mantel iron makes it possible to build the brickwork of the fireplace beyond the height of the appliance.

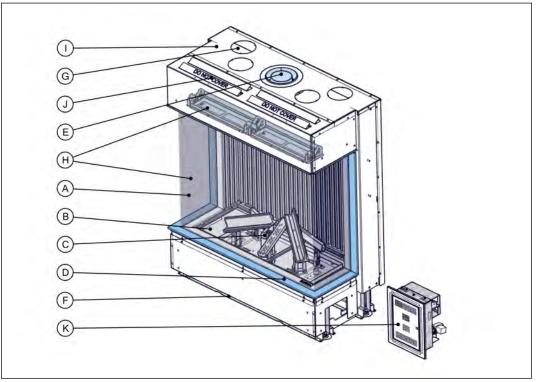

Note:

Unless specified differently, retrofit of the installation options is not possible.

- B Ventilation air outlet opening
- C Connection for connection set (4x)
- D Convection air outlet opening
- E Concentric flue system
- F Operating unit

Figure 10. Typical installation of an appliance with convection set

Safety

3 Safety

3.1 Safety devices on the appliance

Name	Description
Thermo-electric pilot light shut off	Prevents unforseen discharge of gas from the main burner.
Overpressure door (= glass front) and overpressure hatch	If an overpressure occurs in the appliance, the glass front door and the hatch opens for a short duration. When the door and hatch opens, a loud noise can occur. If an overpressure occurs, the installer must do a thorough check on the appliance.

3.2 Safety instructions for installation

Warning:

- The appliance must be positioned and connected as a 'room sealed system' appliance by a certified and registered gas installer.
- Before beginning the installation, check that the details on the rating plate correspond to the gas type and supply pressure to which the appliance will be connected.
- Install the appliance in accordance with the following installation instructions, and the national and the local applicable regulations.
- Do not put flammable materials in the appliance.
- Make sure that the area around the appliance is free of flammable materials at all times. the minimal safe distance is 100 cm from the appliance.
- Make sure that the burner openings stay clean during installation.
 Blockage of the burner openings can lead to a dangerous situation.
- Make sure that the gas regulator block and the piping remain free of cement or other building material. Otherwise, the gas regulator block or the piping can start to leak.
- Do not twist the flexible pipes to the gas regulator block. Make sure that there is no stress on the flexible pipes and the gas regulator block.
- · Make sure that you do not damage the pipes.
- Make sure that the compression fittings do not come loose.
- Do not put the appliance directly against a flammable or non-flammable wall.
- Make sure to protect a flammable floor under the intended position of the appliance with a plate of non-flammable material that extends the full width and depth of the appliance.
- After installation, make sure that the pipes and compression fittings are gas tight.

Caution:

- Only use the items that are supplied or described in the preparation manual and other related documentation.
- Do not use masking tape on the appliance. Masking tape can damage the finish of the appliance.
- Do not insulate the appliance. If necessary, only install strips of white, loose insulation wool that is heat resistant up to at least 1000 °C. Install the insulation strips with a width of maximally 15 cm to protect the walls. Only install these strips on top and on the side of the appliance.
- Do not use fiberglass, rockwool, or any other sort of insulation material.
 These materials produce pungent odor and can produce discoloration of the fireplace.
- Make sure that brickwork is build with a clearing of at least 3 mm between the sides and the top of the appliance and the brickwork. The appliance can expand during operation due to heating.
- Do not build the brickwork higher than the casing without the use of a mantel iron.

3.3 Safety instructions with regard to the environment

- Dispose of the packing materials in an environmentally friendly way.
- Dispose of batteries as chemical waste.
- Dispose of ceramic heat-resistant glass as household waste. Do not dispose of ceramic heat-resistant glass in a glass recycling container.
- Dispose of an obsolete appliance according to instructions of the authorities or the fitter.
- Obey the local regulations.

4 Clearances

Warning: Follow the instructions in this chapter. Failure to follow these instruction can create a fire hazard.

Warning: Do not put the appliance directly against a flammable or non-flammable wall.

All clearances to flammable and non-flammable materials mentioned in this chapter must be obeyed.

4.1 Insulating material requirements

- Use insulating plates with a maximum thermal conductivity of 0.10 W/m.K or a thermal resistance of minimum 10 K.m/W. The table hereunder shows some examples of suitable insulating plate materials.
- Do not use rockwool or glass wool. These materials cause a pungent and unpleasant odor when the appliance is heated.
- Do not use mineral wool

Table 3: Examples of insulation plates

Examples of suitable plate material	Thermal conductivity
Promat Promatect L insulating board	0.083 W/m.K
Skamol Skamotec 225	0.06 W/m.K
Skamol Super-Isol	0.08 W/m.K

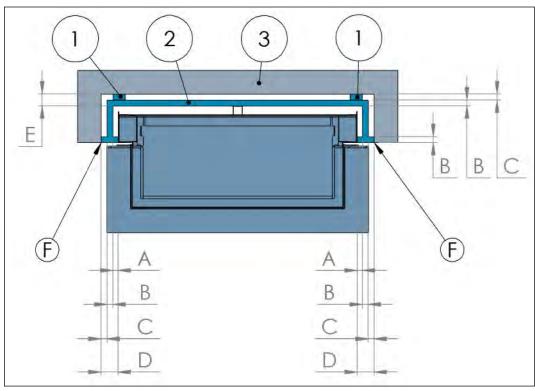

4.2 Clearances to flammable walls

Put a non-flammable insulation plate between the appliance and the rear wall and side wall according figure 11.

Table 4 shows the minimum thickness of the insulation plates and the minimum clearances to flammable materials and walls.

Attention: Make sure there is a 3 mm clearance between the appliance and the surrounding construction, to allow for expansion of the appliance during use.

- 1 Non-flammable spacer
- 2 Non-flammable insulation plate

3 Flammable wall

Figure 11. Clearances to flammable wall - Top view

Table 4: dimensions and minimum clearances to a flammable wall

		Insulation plate 25 mm	Insulation plate 35 mm
Α	Air gap	25 mm	25 mm
В	Thickness plate	25 mm	35 mm
С	Air gap / Spacer	25 mm	15 mm
D	A+B+C	75 mm	75 mm
E	B+C	50 mm	50 mm
F	Minimum 3 mm clearance between appliance and surrounding construction		

4.3 Clearance to flammable floor (under the appliance)

Put a non-flammable insulation plate with a minimum thickness of 25 mm under the appliance. To avoid damage to this non-flammable plate, put ceramic or steel tiles (approx. $10 \times 10 \text{ cm}$) under the feet of the appliance.

Put a non-flammable hearth (floor stone) if the underside of the appliance is less than 10 cm above a flammable floor.

4.4 Clearances to flammable ceiling

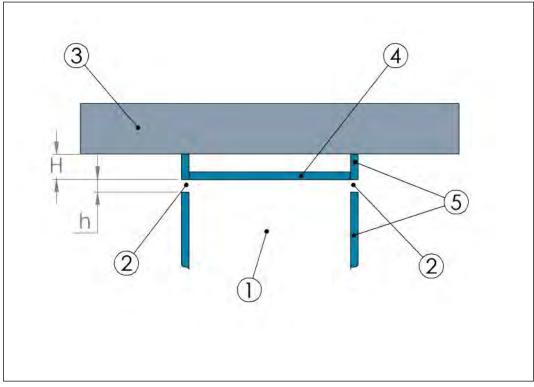

Put a non-flammable insulation plate (false ceiling) of minimum 2.5 cm thickness at a height of minimum 50 cm above the appliance. Keep a free space of minimum 10 cm between the insulation plate and the flammable ceiling.

Alternative without a false ceiling: Make an open space of minimum 50 cm height between the chimney enclosure top side (complete width and depth of the enclosure) and the flammable ceiling

Figure 12 shows the minimum thickness of the insulation plates and the minimum clearances to a flammable ceiling

Make sure the total area of the convection air outlet opening is minimum 300 cm².

- 1 Chimney enclosure
- 2 Convection air outlet opening
- 3 Flammable ceiling

- 4 Insulation plate (false ceiling)
- 5 Insulation plates

Figure 12. Clearances to flammable ceiling - Front view

Table 5: Minimum dimension and clearance to flammable ceiling

		With false ceiling, minimum 25 mm thickness	Without false ceiling
h	Area of the convection air outlet opening	Minimum 300 mm ²	Minimum 50 cm open space between ceiling and chimney enclosure
Н	Height of the false ceiling minimum distance convec- tion air outlet opening - flammable ceiling	Minimum 12.5 cm (= 10 cm free space + 25 mm false ceiling)	Not applicable (the top side of the chimney enclosure is open with a clearance of minimum 50 cm to the flam- mable ceiling.

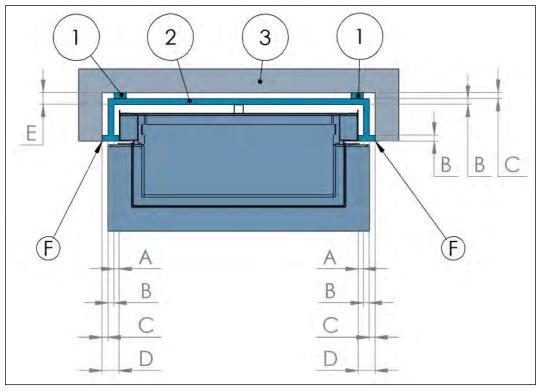

4.5 Clearances to non-flammable walls

Put a non-flammable insulation plate between the appliance and the rear wall and side wall according figure 3.

Figure 13 and table 6 show the minimum thickness of the insulation plates and the minimum clearances to non-flammable materials and walls.

Attention: Make sure there is a 3 mm clearance between the appliance and the surrounding construction, to allow for expansion of the appliance during use

- 1 Non-flammable spacer
- 2 Non-flammable insulation plate
- 3 Non-flammable wall

Figure 13. Clearances to non-flammable wall - Top view

Table 6: Minimum dimensions between appliance and non-flammable walls

		Insulation plate 12 mm	Insulation plate 25 mm	Insulation plate 35 mm
Α	Air gap	20 mm	15 mm	15 mm
В	Thickness plate	12 mm	25 mm	35 mm
С	Air gap / Spacer	20 mm	15 mm	0 mm
D	A+B+C	52 mm	55 mm	50 mm
E	B+C	32 mm	35 mm	35 mm
F	Minimum 3 mm clearance between appliance and surrounding construction			

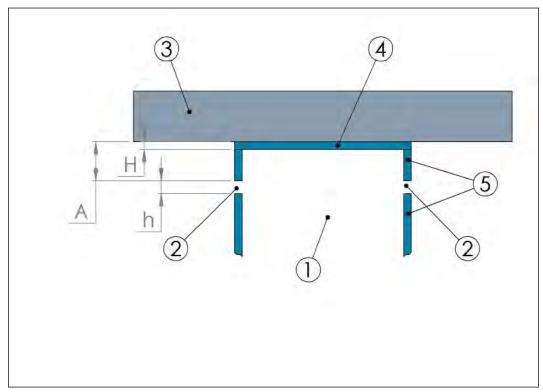

4.6 Clearances to a non-flammable ceiling

Put a non-flammable insulation plate (false ceiling) of minimum 2.5 cm thickness at a height of minimum 50 cm above the appliance.

Alternative without a false ceiling: Make an open space of minimum 20 cm height between the chimney enclosure top side (complete width and depth of the enclosure) and the non-flammable ceiling

Figure 14 shows the minimum thickness of the insulation plates and the minimum clearances to a non-flammable ceiling

Make sure the total area of the convection air outlet opening is minimum 300 cm².

- 1 Chimney enclosure
- 2 Convection air outlet opening
- 3 Non-Flammable ceiling
- 4 Insulation plate (false ceiling)
- 5 Insulation plates

Figure 14. Clearances to non-flammable ceiling - Front view

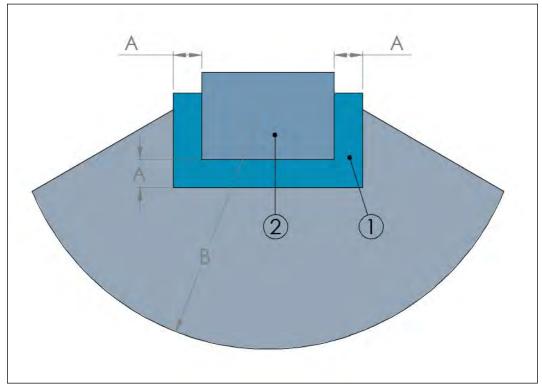

Table 7: Minimum dimension and clearance to non-flammable ceiling

		With false ceiling, minimum 25 mm thickness	Without false ceiling
h	Area of the convection air outlet opening	Minimum 300 cm ²	Minimum 20 cm open space between ceiling and chimney enclosure
н	Height of the false ceiling	Minimum 25 mm (= thick- ness false ceiling)	Not applicable (the top side of the chimney enclosure is open with a clearance of minimum 20 cm to the ceiling.
А	Distance between convection air outlet opening and ceiling	Minimum 13 cm	Minimum 20 cm open space between ceiling and chimney enclosure

4.7 Clearances in front of the appliance

Non-flammable hearth (floor stone), minimum thickness 12 mm

2 Appliance

Figure 15. Minimum distances in front of the appliance

А	Minimum 30 cm
В	Minimum 100 cm (1 meter) radius from the center point of the appliance.

4.8 Mantel clearances

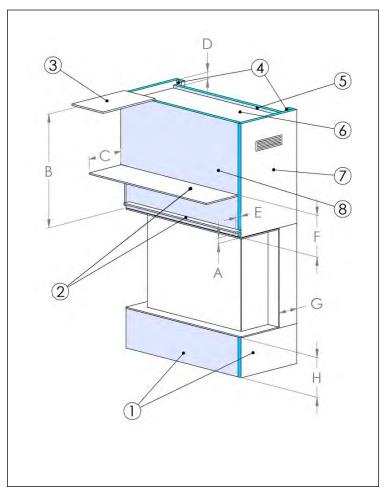

Caution:

All insulation plates in this chapter must be made of non-flammable material.

Put a mantel piece of flammable material minimum 5 cm from the top and sides of the appliance

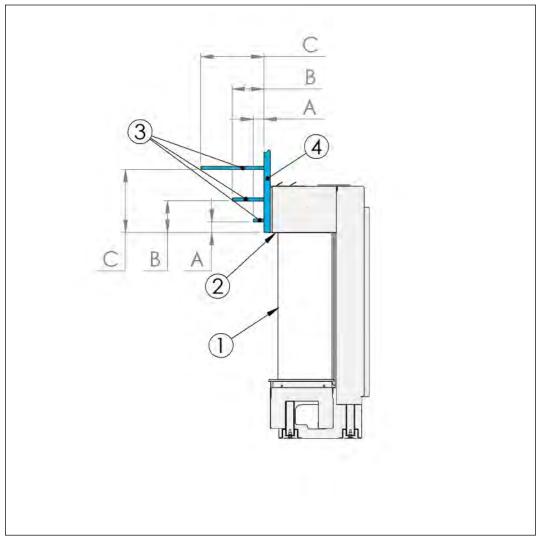

Clearances barbas.

- 1 insulation plate
- 2 Flammable mantel piece
- 3 Ceiling
- 4 Non-flammable spacer
- 5 Insulation plate back panel
- 6 Non-flammable false ceiling
- 7 Insulation plate side panel
- 8 Insulation plate front panel

Figure 16. Mantel piece clearances

Α	Minimum 5 cm from top of glass		
В	Flammable ceiling: minimum 60 cm from glass		
	Non flammable ceiling: minimum 50 cm from glass		
С	Mantel piece depth maximum 30 cm		
D	Flammable ceiling: minimum 10 cm		
	Non flammable ceiling: minimum 0 cm		
E	Mantel piece depth: maximum 5 cm		
F	Minimum 30 cm from top of glass		
G	Minimum 5 cm		
Н	Minimum 10 cm to flammable floor (or put a non flammable hearth plate with a depth of minimum 30 cm in front of the complete width of the glass)		

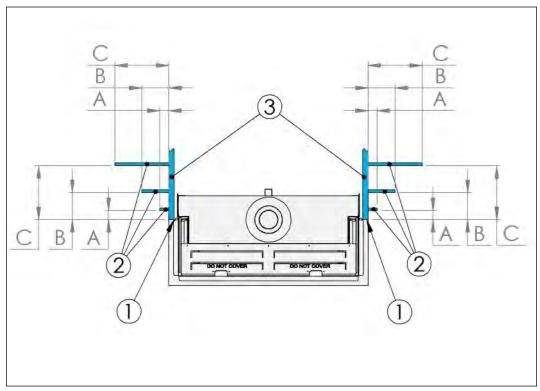

- 1 Appliance
- 2 Top of front glass pane
- 3 Flammable mantel piece
- 4 insulation plate

Figure 17. Top mantel piece clearances

3 Insulation plate

Figure 18. Side mantel piece clearances

	Width of mantel piece / Depth of mantel piece	
Α	5 cm	
В	10 cm	
С	15 cm	

4.9 Clearances for concentric flue system

Do not insulate the concentric flue pipe.

Concentric flue pipe safety distances to flammable material:

- Vertical pipe (all sides): B = minimum 2.5 cm.
- Horizontal pipe top: A = minimum 7.5 cm.
- Horizontal pipe bottom and sides: B = minimum 2.5 cm.

The figures show the minimum clearances from a horizontal and a vertical concentric flue pipe to flammable material.

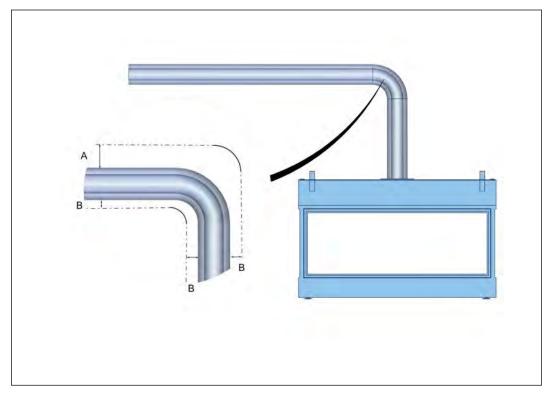

Figure 19. Clearances concentric flue

4.10 Clearances for TV installation

Caution: Prevent that the temperature around the TV and the TV cables becomes higher than normal. The clearances given in this chapter prevent a too high temperature when the TV installed above the appliance.

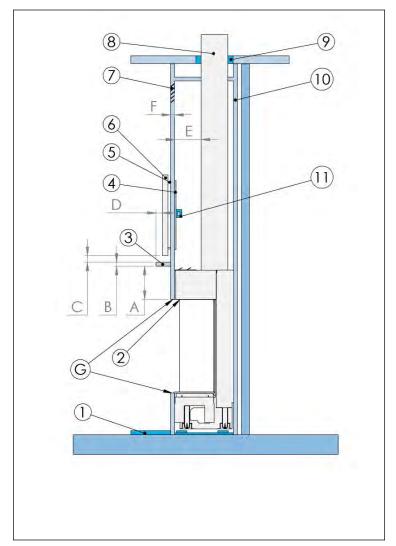

Important:

- Make sure to use a non-flammable insulation plate with a thickness of minimum 4 cm for the front of the chimney enclosure. Refer to chapter 4.1 for specifications.
- Put the power supply and signal cables in a insulated cable duct behind
 the front of the chimney enclosure. Make the insulated cable duct of
 minimum 12 mm non-flammable insulation plates. Refer to chapter 4.1 for
 specifications.
- To prevent too much heat radiation to the TV, install a mantel piece between the TV and the top of the appliance.

Two methods to install the TV are possible:

- · Surface mounted
- Flush mounted

Clearances barbas.

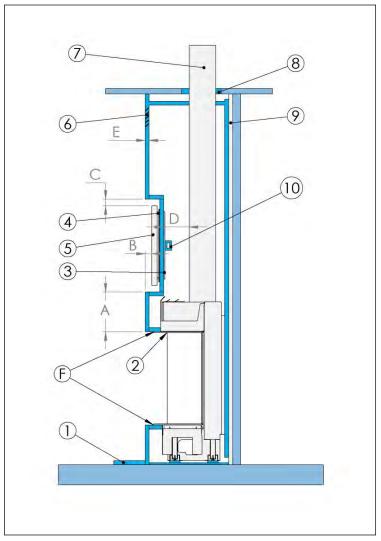

- 1 Non-flammable hearth
- 2 Convection air inlet
- 3 Mantel piece
- 4 Steel studs
- 5 TV wall mount bracket
- 6 TV

- 7 Convection air outlet
- 8 Concentric flue
- 9 Non-flammable material³
- 10 Air gap and spacers
- 11 Cable duct

Figure 20. TV installation - surface mounted

Α	Minimum 25 cm between mantel piece and top of glass pane

В	Minimum 2.5 cm horizontal clearance between front of TV and front of the fireplace enclosure	
С	Minimum 5 cm clearance at all 4 sides of the TV	
D	Minimum 2.5 cm	
E	Minimum thickness 4 cm	
F	Minimum 3 mm clearance between appliance and surrounding construction	

Specifications according the installation instructions of the manufacturer of the concentric flue system and local regulations.

5 Installation

5.1 Installation requirements

5.1.1 Requirements on the installation of the appliance

Important:

- Make sure the floor is made of concrete or a solid pedestal of nonflammable material.
- Make sure the floor can support the weight of the appliance. Refer to chapter 8 for the weight of the appliance.
- Make sure that the floor temperatures below and in front of the appliance cannot be higher than 85 °C, during use of the appliance. If necessary, put a non-flammable plate on the floor in front of the appliance.
- Refer to chapter 4 for clearances to flammable and non-flammable materials.
- Make sure the distance between the underside of the appliance and the floor is minimum 1 cm.
- Make sure that the details of the rating plate of the appliance agree with the gas type and gas pressure of the gas supply.
- Make sure that the location agrees with the requirements. Refer to the preparation manual.
- Make sure to install ventilation openings in the fireplace enclosure. Refer to chapter 4
 for dimensions of the ventilation openings.
- Make sure there is a 3 mm clearance on the sides and top of the appliance to allow for expansion of the appliance during use.
- Do not insulate the appliance with insulation material. Only use ceramic wool strips (minimum 1000 °C heat resistant)with a width of maximum 15 cm on the sides and top of the appliance, to protect the wall against direct heat contact.

5.1.2 Requirements on the chimney

- This appliance has been approved in combination with the components of the concentric flue systems listed in the preparation manual, according to the European standards for gas appliances and may therefore only be used with these components.
- Only use the following brands for the installation of the concentric flue system:

Table 8: Overview of allowed concentric flue system brands

Manufacturer	System	Flue gas extraction
Bellfires	Muelink & Grol system	Natural draught
Poujoulat	DUOGAS system	Natural draught
Ontop	Metaloterm US system	Natural draught
Jeremias/STB	H-TWIN system	Natural draught
Jeremias	TWIN-GAS system	Natural draught
Modinox	PLA system	Natural draught
Barbas	Opti-Vent system	Forced draught

- Do not use a combination of parts from different brands for the installation of the concentric flue system.
- · Do not insulate the concentric flue system.

5.2 Installation procedure

Note:

The appliance is factory set to the correct nominal heat input. The pilot light is set to the correct level of gas consumption.

• Do all the procedures in this section. Optional procedures are indicated with (optional).

5.2.1 Preparation

Do the following preparatory work before the start of the installation of the appliance:

- Make sure the gas supply line is near the intended location of the built-in operating
 unit, to make it possible to connect the gas supply line with the gas regulator block in
 the operating unit.
- Install a 230 VAC earthed electrical socket near the intended location of the appliance.
- If the optional Opti-Vent flue system will be installed, make sure to Install an extra 230 VAC earthed electrical socket near the intended location of the appliance
- Build the insulating walls behind the intended location of the appliance according the requirements of chapter 4 before the installation of the appliance starts.

5.2.2 Install the appliance

Caution: Do not lift the appliance with any kind of forklift. This will cause damage to the underside of the appliance. Only use the carrying handles to move the appliance.

1. Install the carrying tubes on the appliance. Use the carrying handles to move the appliance.

Note: The carrying handles are not included with the appliance.

2. Remove the carrying handles.

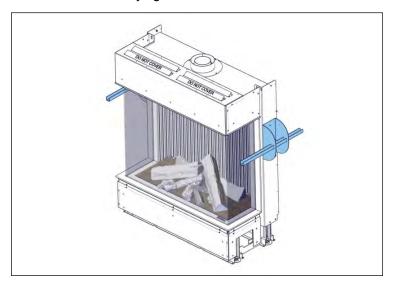

Figure 22. Appliance with carrying handles

5.2.3 Horizontally align the appliance

Aligning with adjustable feet

1. Make sure the distance x is minimum 1 cm.

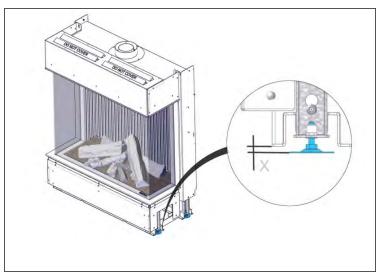

Figure 23. Aligning with adjustable feet

- 2. Adjust the adjustable feet. Use a 13 mm fork spanner.
- 3. Make sure the appliance is installed horizontally. Use a spirit level.

Aligning with adjustable height legs (optional)

1. Attach the 4 adjustable height legs on the appliance and set to the required height. Use a 13 mm fork spanner.

Figure 24. Aligning with adjustable height legs

2. Adjust the 4 adjustable feet with a 13 mm fork spanner until the appliance is level. Use a spirit level.

Attach the appliance to the rear wall

- 1. Attach the appliance to the rear wall with 2 wedge bolts and the mounting brackets...
- 2. Make sure the appliance is horizontal. Use a sprit level. If necessary adjust the mounting brackets.

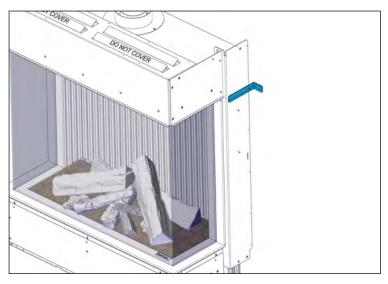

Figure 25. Attachment to the rear wall

5.2.4 Make the gas connection

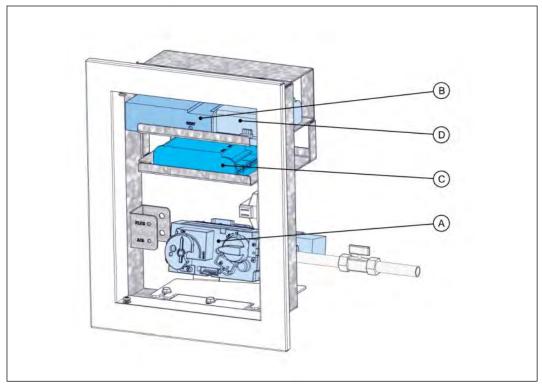

Important: In some countries national regulations prescribe the installation of a gas valve in the gas supply line to the appliance at an accessible location near the appliance. Contact your local gas supplier or your qualified gas installer for more information on this.

- 1. Remove the decorative edge and the door of the operating unit.
- 2. Put the operating unit on maximum 50 cm from the side of the appliance
- Remove the elastic strap that holds the gas regulator block and receiver on the appliance and put them near the operating unit. Make sure not to disconnect electrical cables and gas lines.
- 4. Put the gas regulator block, receiver, light module and if applicable the wifi-box on the destined position in the operating unit.

Gas Fire Panorama 110-70 37

- A Gas regulator block
- B Receiver

- C Light module
- D Wifi-box (optional)

Figure 26. Position of components in operating unit

Warning:

Make sure not to damage the gas lines and that compression fittings are not loose when the gas regulator block is moved.

Make sure not to twist the flexible gas lines.

- 5. Connect the gas supply line to the gas regulator block.
- 6. Make sure all electric and gas lines from the appliance to the operating unit are in a free space that is accessible after finish of the installation.

5.2.5 Do a check on the gas connections

• Make sure that the gas connections do not leak. Use a mixture of 50% liquid soap and 50% water or a leak tester to test for gas tightness.

5.2.6 Make the electrical connection

Caution:

- · Use a wall socket with earth connection.
- The socket must be accessible at all times.
- Connect the plug to the wall socket.
- 2. Make sure that the electrical cable does not touch the appliance, due to the high temperatures of the appliance.

barbas.

5.2.7 Connect the concentric flue system

- 1. Connect the concentric flue system to the appliance. Use the materials that are specified in the preparation manual. Do not use any other materials.
- 2. Make sure that all mechanical connections of the concentric flue system are correctly connected.
- 3. Attach the concentric connection pipes to the wall or ceiling with metal brackets. Refer to the manual 'assembly instructions for concentric flue system'.

5.2.8 Connect the convection set (optional)

1. Put the collar adaptors in the open convection air outlet openings.

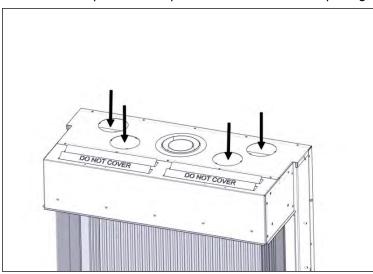

Figure 27. Position of convection air outlet openings

- 2. Bend out the 3 lips on each collar adaptor, to attach the collar adaptor on the outlet opening.
- 3. Connect the flexible aluminum pipes (B) on the collar adaptors (A) . Use the hose clamps (C).
- 4. Connect the flexible aluminum pipes to fitting boxes in the chimney enclosure.

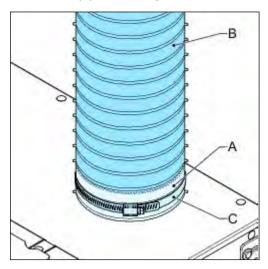

Figure 28. Connection of flexible pipe

5.2.9 Install the flue gas restriction plate

Safety conditions

Caution:

Install the correct restriction plate as specified in the preparation manual. An incorrect restriction plate can cause damage to the appliance.

Procedure

- 1. Remove the glass panes. See chapter 6.2.1 for instructions.
- 2. Remove the baffle plate (C), by unscrewing two screws.
- 3. Install the restriction plate (A) with the fasteners (B) in the appliance. Use the restriction plate specified in the preparation manual.
- 4. Install the baffle plate (C) again with the two screws.

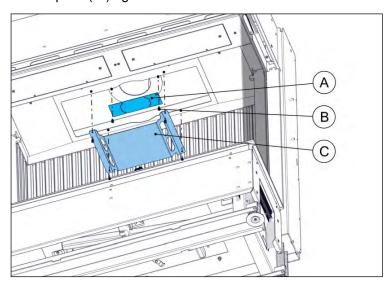

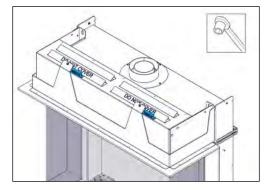

Figure 29. Restriction plate and baffle

5.2.10 Install the mantel iron (option)

The appliance equipped with the 10 cm decorative frame has a mantel iron attached on the top of the 10 cm frame⁵. The mantel iron supports brickwork or plates above the appliance.

Make sure the brickwork or plating does not rest on the appliance directly.

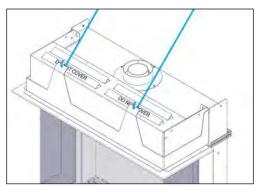

1. Remove the 2 protective plates labeled "REMOVE".

⁵ An appliance with a 4 cm decorative frame does not need a mantel iron.

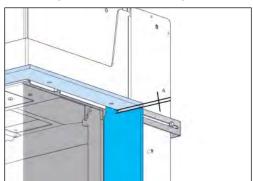

2. Use the 2 tension bars to attach the mantel iron to the rear wall.

3. Make sure the tension bars are at an angle of 60° towards the appliance.

- 4. Level the mantel iron with the tension sleeves. Use a level.
- 5. Make sure the distance between mantel iron and underside of the glass is equal at all sides.
- 6. Make sure distance A is minimum 2 mm between the mantel iron and the top of the side panels. This lets you remove the side panels.

- 7. Make sure the mantel iron is perpendicular to the side panels.
- 8. Put a ceramic wool strip on top of the mantel iron, before putting brickwork or plates on it.

5.2.11 Build the fireplace

Safety conditions

Warning: Do not cover the top side of the appliance with brickwork, plates or any other material.

Installation

Caution:

- Remove the side panels and the front panel of the frame to prevent damage of the frame during work. See chapter *6.2.1*.
- Remove the glass panes. See chapter 6.2.1.
- Make sure that the gas piping remains free of cement or other building material. Otherwise, the gas piping can start to leak.
- Make sure to have a clearance of minimum 3 mm between the sides and top of the appliance and the brickwork. The appliance can expand during operation due to heating.
- Do not use masking tape on the appliance. Masking tape can damage the finish of the appliance.

Note:

- Make sure that the thickness of any plastering is taken into account when making the brickwork.
- If you use other material than bricks, install the material in accordance with the instructions of the supplier of the material.

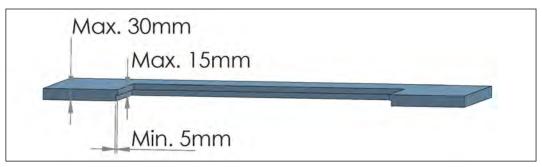

Procedure

- 1. Identify the positions where the inlet grates and the outlet grates must be put. See chapter 4 and refer to the preparation manual.
- Identify the position of the operating unit
- 3. Build the fireplace to just above the intended position of the operating unit .
- 4. Install the operating unit with the gas regulator block, receiver and light module. Do the procedure given in chapter *5.2.4*.
- 5. Build the brickwork around the appliance up to the upper frame.
- 6. If applicable, install the tension bars on the mantel iron and the rear wall. See chapter *5.2.10*.
 - a) Put ceramic wool strip on the top of the mantel iron. Brickwork can be built on top of the ceramic wool strip.
- 7. Build the fireplace around the appliance.
- 8. Install the grates on the inlet openings and the outlet openings.
- 9. Make sure the overpressure hatches are placed correct. Refer to chapter *5.3.1* for instructions.
- 10. Install the glass panes. See 6.2.2.
- 11. Install the front panel and the side panels of the frame on the appliance. See chapter *6.2.2*.

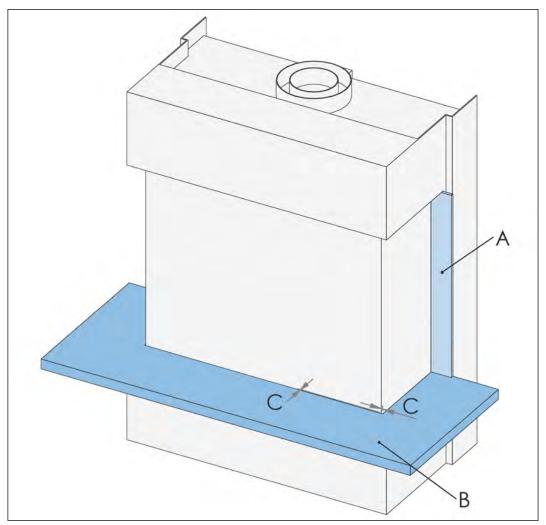

5.2.12 Fitting the natural stone plateau

If the appliance (frameless version) is finished with a natural stone plateau, please consider the following:

barbas.

· Natural stone plateau dimensions.

- The vertical steel strip A must be remain removable, so that the glass can still be removed. B is the natural stone plateau.
- Make sure that the distance C between the stone and glass is a minimum of 4 mm.

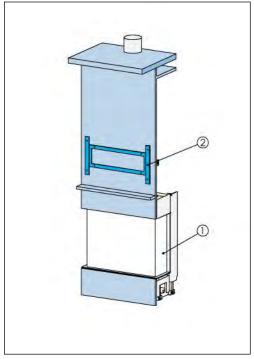

5.2.13 Extra: TV installation above the appliance

Important:

- Use a TV wall mount bracket that is applicable for the TV.
- To attach the TV wall mount bracket, make sure to use steel studs at the back of the front plate of the chimney enclosure.

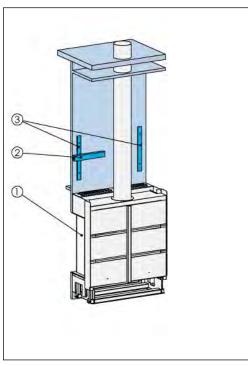

Gas Fire Panorama 110-70

1 Appliance

2 TV wallI mount bracket

Figure 30. TV installation above the appliance (front view)

- 1 Appliance
- 2 Insulated cable duct

3 Steel studs

Figure 31. TV installation above the appliance (rear view)

5.3 Prepare the appliance for use

 Do all the procedures in this section. Optional procedures are indicated with (optional).

5.3.1 Do a check on the overpressure hatches

- 1. Make sure that the overpressure hatches are loose. Push the overpressure hatches up and lower them back in position.
- 2. Do a check on the gasket of the overpressure hatches. The gasket must seal the opening.
- 3. If necessary, replace the gasket. Lift the hatch and twist it to remove the hatch and to get access to the gasket.

5.3.2 Do a check on the operation of the lighting

 Make sure that the operation of the ambient lights functions well. To operate the lights with the remote control, refer to the user manual

5.3.3 Put the ceramic logs on the burners

Refer to chapter 2.5 for an overview of the wood logs and their numbers.

Caution: Handle the ceramic logs with care.

- Make sure all items of the ceramic log set are there. Refer to chapter 2.5.
- 2. Remove the 2 screws that hold the two front burners on the gas supply line.

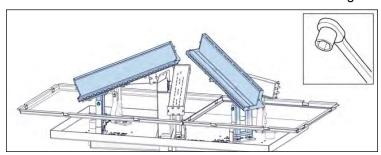

Figure 32.

3. Remove both front burners.

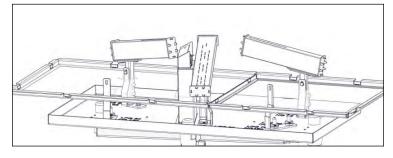

Figure 33.

4. Put ceramic log no. 43 on the center burner.

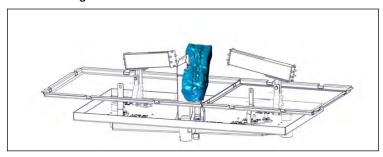

Figure 34.

5. Put ceramic log no. 41 on the left back burner and ceramic log no. 42 on the right back burner.

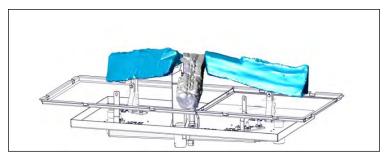

Figure 35.

6. Attach both front burners on the gas supply line with the 2 screws.

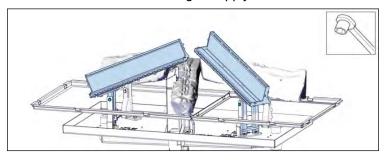

Figure 36.

7. Put ceramic log no. 39 on the left front burner and ceramic log no. 40 on the right front burner.

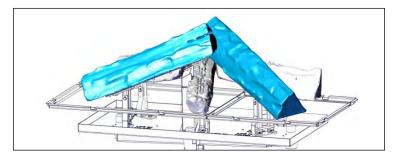

Figure 37.

- 8. Do a check on the ignition of the burners
 - a) Make sure the ceramic logs are in the correct position as described above.
 - b) Make sure the plug is in the wall socket.
 - c) Make sure the main gas valve is open.
 - d) Start the appliance and do a check on the ignition of the pilot burner and main burners. Refer to the user manual for the start procedure.
 - e) If the ignition of the pilot burner and main burners is correct, stop the appliance with the remote control. Refer to the user manual for the stop procedure.
 - f) Continue with the installation after the appliance has cooled down.
- 9. Apply the fire glass equally on the grate. Use the fire glass 'Black' along the edges of the grate. Cover the rest of the grate with a mixture of fire glass 'Black' and fire glass 'Dark Amber'.
- 10. Put ceramic logs no. 36, 44, 46 and 47 on the fire glass as shown on the picture.

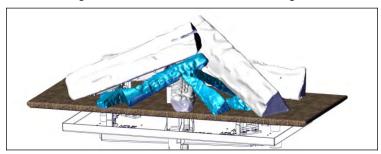

Figure 38.

11. Install the glass panes. Refer to chapter *6.2.2* for the correct procedure.

5.3.4 Do a final check on the fireplace

Safety conditions

Caution:

Wait 4 weeks after the installation before you use the fireplace. The cement needs to harden. A final check on the fireplace can be done directly after the installation.

Procedure

- Start the appliance and do a check on the ignition of the pilot light and main burner.
 The ignition must be quiet and must produce a calm flame. To start the appliance,
 refer to the user manual.
- 2. Do a check on the main burner. The flames increase in height and change from blue/ yellow to yellow.
- 3. If all flames are yellow, the appliance is ready for use.

6 Maintenance

6.1 Annual maintenance

· Do all procedures in this section minimum every year.

Caution:

- Use only original parts. Individual parts for replacement or accessories are available from your Barbas dealer.
- Introduced modifications to the appliance are not permitted.

6.1.1 Clean the appliance

Safety conditions

Caution:

- Turn off the gas supply to the appliance before cleaning.
- Turn off the power supply to the appliance before cleaning.

Procedure

- 1. Remove the glass. Refer to chapter 6.2.1.
- 2. Remove the content from the burner bed.
- 3. Clean the removed content carefully with a soft brush.
- 4. Clean the inside of the appliance, including the main burner, the pilot light burner and the flue system.
- 5. Remove the grate.

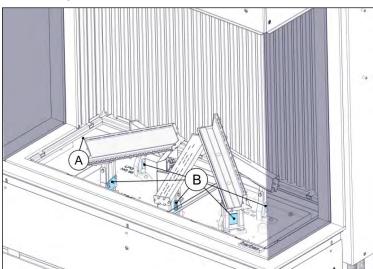

Figure 39. Position of air intake and primary air inlet openings

- 6. Clean the combustion air intake
 - a) Clean the combustion air intake (A) at the bottom sides of the appliance.
 - b) Clean the primary combustion air inlet openings (B) of the main burners.
- 7. Clean the ambient light bulbs. Refer to chapter 6.2.6.
- 8. Clean the convection air route.

- 9. Do a check for damage on the inside of the appliance, including these parts:
 - a) Main burners.
 - b) Pilot burner.
 - c) Combustion air intake.
 - d) Overpressure hatches.
 - e) Flue system. Use a flashlight if necessary.
- 10. Clean the glass. For standard glass, refer to chapter *6.2.4*. For anti-reflective glass refer to chapter *6.2.5*.
- 11. If the black mirror rear wall is installed in the appliance, clean the black mirror. Use glass spray or ceramic hob cleaner.
- 12. Install the glass panes. Refer to chapter 6.2.2.
- 13. Prepare the appliance for use. Refer to chapter 5.3.4.

6.1.2 Do a check on the appliance

- 1. Do a check for leaks on the gas pipes and the gas pipe connections. Refer to chapter 5.2.5.
- 2. Make sure that the pilot light operates correctly. The pilot light must not show any anomalies.
- 3. Make sure that the main burner operates correctly. The fire must not show any anomalies.
- 4. Do a check of the gas supply pressure and the burner pressure.
 - a) Use the inlet pressure tap and outlet pressure tap on the gas regulator block to measure the supply pressure and the burner pressure.
 - b) Measure the pressure when the appliance is off and when the appliance burns on maximum. Refer to chapter 8 for the required supply pressure and burner pressure.
- 5. Make sure that the ambient lighting operates correctly.
- 6. Do a check on the concentric flue system and the outlet construction. Make sure that all the connections of the concentric flue system are secure.

6.2 Maintenance procedures

6.2.1 Remove the glass panes

Warning: Before the start of this procedure make sure the appliance is off and cooled down to room temperature.

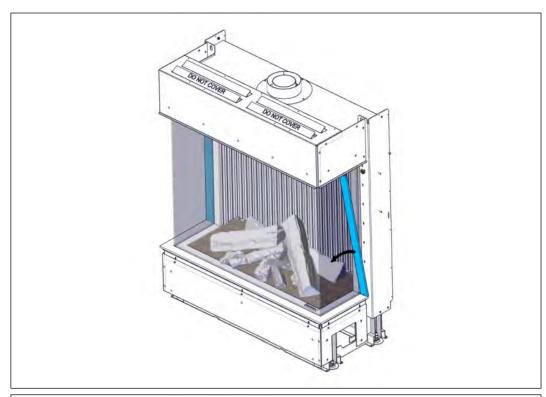

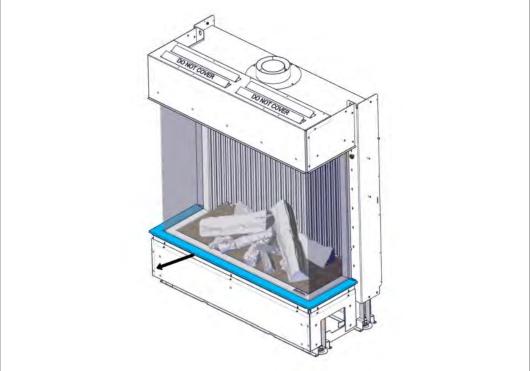

Caution: Use protective gloves.

1. Turn off the gas supply to the appliance before removing the glass panes.

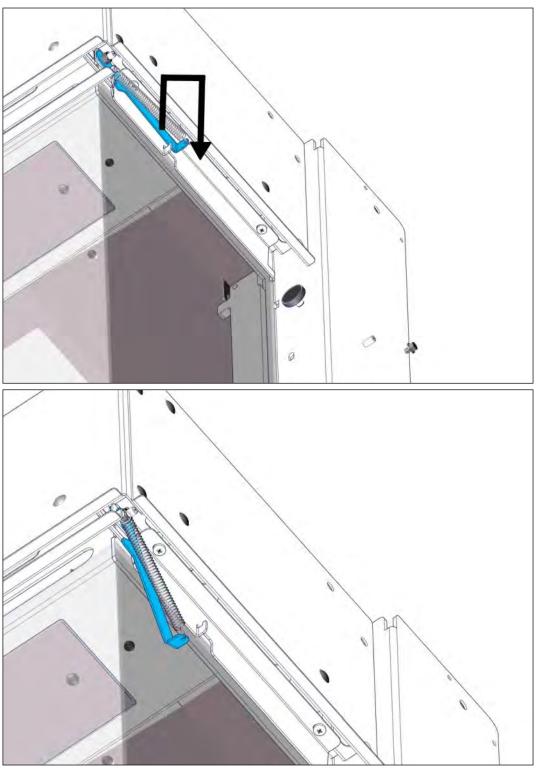

Gas Fire Panorama 110-70

Maintenance barbas.

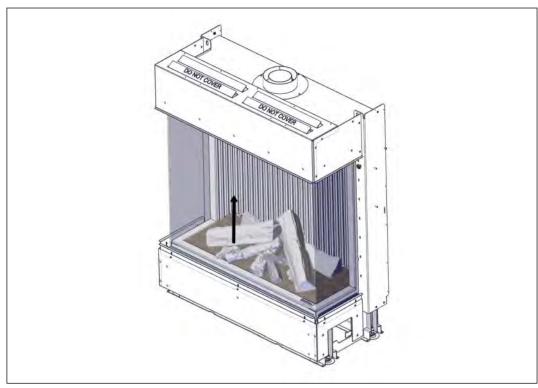

2. Remove the side panels and front panel.

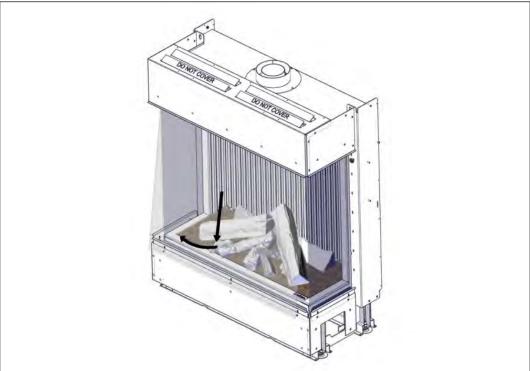

3. Unlock the fastening levers on the top left and right of the glass panes.

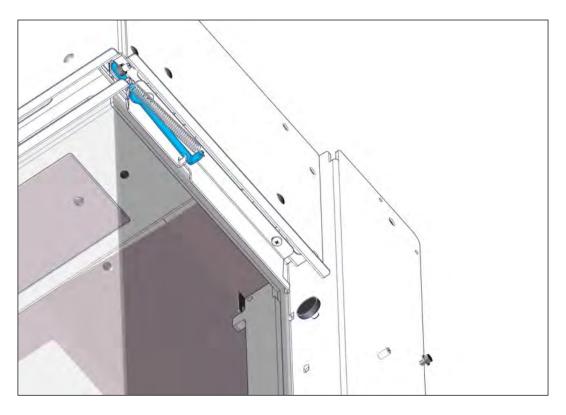

Gas Fire Panorama 110-70 51

Maintenance barbas.

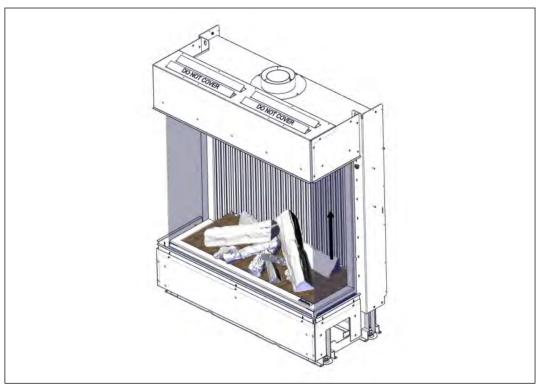

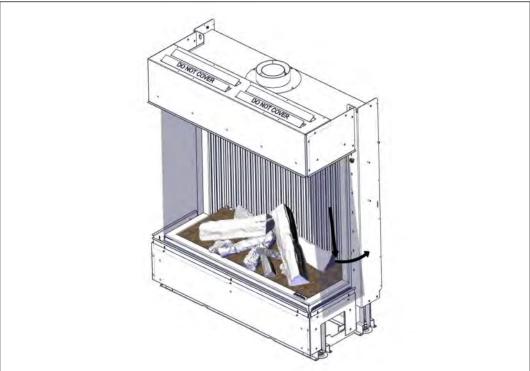

4. Lift the front glass pane a little, and remove it in a slanted manner.

5. Loosen the screws left and right of the top side strips. Do not remove the screws and strips.

Maintenance barbas.

6. Remove the glass panes on the sides with the same procedure as the front glass.

barbas.

6.2.2 Install the glass panes

Caution:

Use protective gloves.

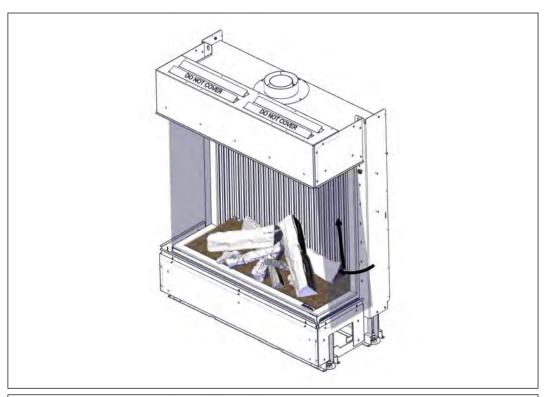

Caution:

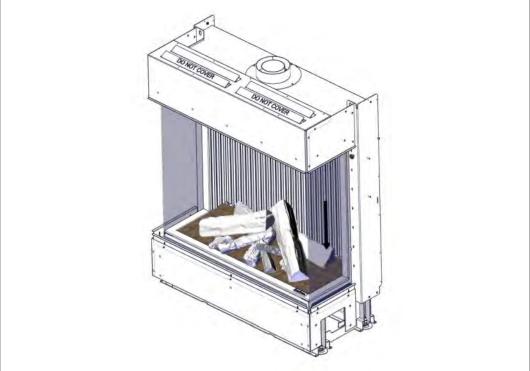

Make sure that the glass panes fit properly in the appliance and seals the inside of the appliance. If the glass does not fit properly there is a risk of flue gas leakage.

1. Install the glass panes and panels in the reverse order of the procedure 'Remove the glass panes'

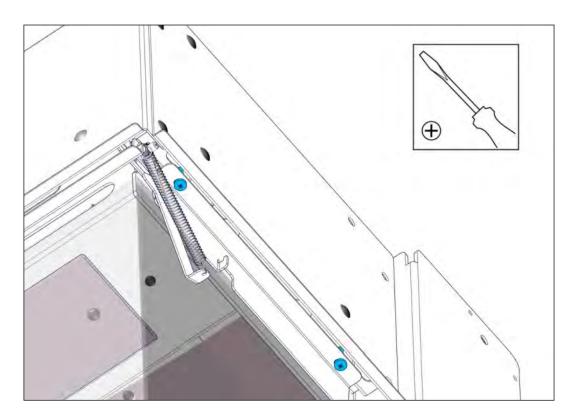

Gas Fire Panorama 110-70

Maintenance barbas.

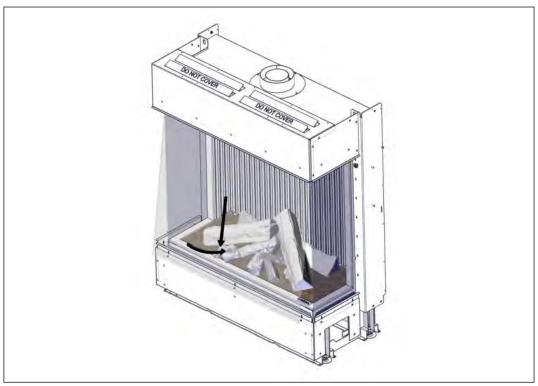

2. Install the glass panes on the sides, by lifting the glass a little in a slanted manner and place it in the strips (top and bottom).

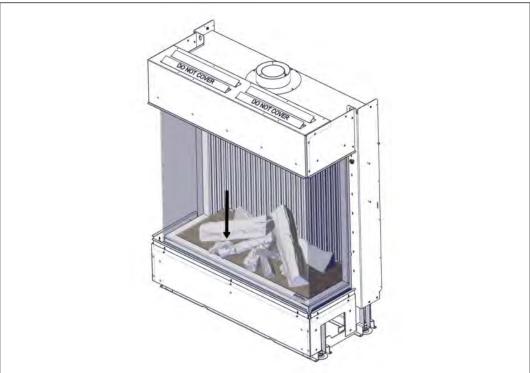

3. Tighten the screws left and right of the top side strips.

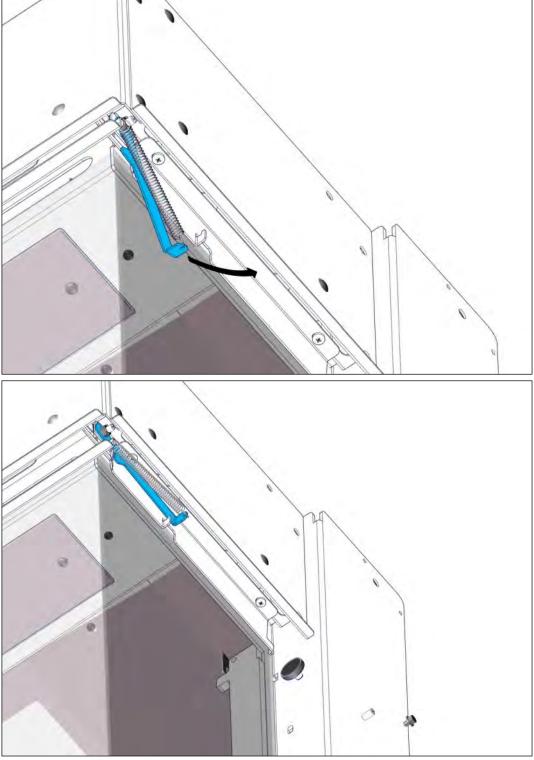

Gas Fire Panorama 110-70

Maintenance barbas.

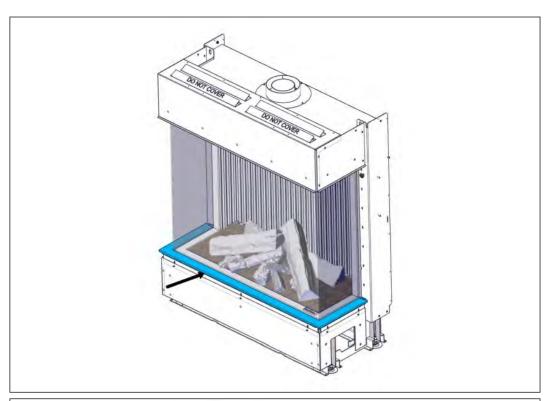

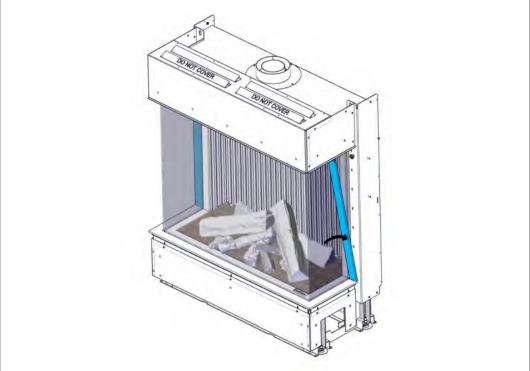

4. Install the front glass pane, by lifting the glass a little in a slanted manner and place it in the strips (top and bottom) .

5. Lock the fastening levers on the top left and right of the glass panes.

Maintenance barbas.

6. Install the front panel and side panels.

Caution:

- Make sure whether the front glass pane is placed exactly in the middle.
- Make sure that there are no gaps between the glass panes. Otherwise, there is risk of flue gas leakage.

6.2.3 Disassembly of burners and burner bed

Warning: Before the start of this procedure make sure the appliance is off and cooled down to room temperature.

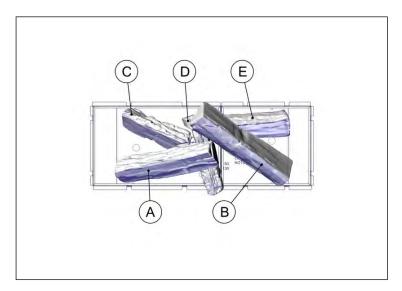

Figure 40. Position of ceramic wood logs and burners

- 1. Remove the glass panes. Refer to chapter 6.2.1.
- 2. Carefully remove the small decorative wood logs.
- 3. Carefully remove ceramic wood logs A and B.
- 4. Unscrew the 2 screws holding burners A and B.
- 5. Remove burners A and B.
- 6. Carefully remove ceramic wood logs C, D and E.
- 7. Unscrew the 3 screws holding burners C, D and E.
- 8. Remove burners C, D and E.
- 9. Remove the fire glass
- 10. Remove the 2 grates.

To assemble the burner and burner bed do the procedure above in reverse order. See also chapter *5.3.3*.

6.2.4 Clean the standard glass

Warning: Before the start of this procedure make sure the appliance is off and cooled down to room temperature.

Caution:

If you have anti-reflective glass, refer to chapter *6.2.5*, to avoid damage to the anti-reflective coating on the glass.

Gas Fire Panorama 110-70

- Clean the glass with a soft cloth, a sponge or paper. Use glass cleaner or ceramic hob cleaner.
- 2. Make sure that the glass is dry. Water droplets can leave a mark on the glass.

6.2.5 Clean the anti-reflective glass

Warning: Before the start of this procedure make sure the appliance is off and cooled down to room temperature.

Caution:

- Do not use hard (scouring) sponges, steel wool, abrasive products, caustic products, or cleaning agents that contain ammonia. The use of these items on the glass can damage the coating layers.
- Use neutral cleaning agents to clean the glass. This includes products like 'Instanet' or 'Glassex'.
- 1. Clean the glass with a soft cloth or a sponge.
- 2. Make sure that the glass is dry. Water droplets can leave a mark on the coating.

6.2.6 Replace the ambient light bulb when broken

Warning: Before the start of this procedure make sure the appliance is off and cooled down to room temperature.

- 1. Turn off the power supply to the appliance.
- 2. Remove the glass panes. Refer to chapter 6.2.1.
- 3. Remove the burners and burner bed. Refer to chapter 6.2.3.
- 4. Carefully unscrew the broken light bulb from the ceramic fitting.

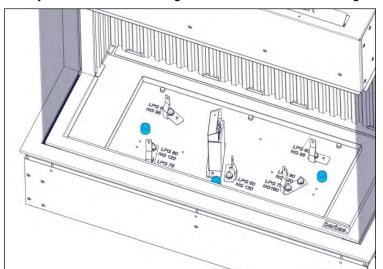

Figure 41. Position of ambient light bulbs

5. Carefully turn the new light bulb in the ceramic fittings.

Caution:

- Turn the ambient light bulbs completely into the ceramic fitting!
- Use only the Barbas ambient light bulb.
- 6. Make sure that the ambient lighting operates correctly. To operate the lights with the remote control, refer to the user manual.
- 7. Assemble the burner bed and the burners and glass panes. Refer to chapter *6.2.3* and chapter *5.3.3* for assembly instructions.
- 8. Turn on the power supply to the appliance.
- 9. Do a final check of the appliance. Refer to chapter 6.1.2.

Gas Fire Panorama 110-70 63

7 Troubleshooting

Table 9: Troubleshooting

Problem	possible cause	solution
The main fire stops to burn	The concentric flue system is not installed according to the specified instructions.	Install the concentric flue system correctly. Refer to the preparation manual.
	An incorrect flue gas restriction plate is fitted.	Install the correct gas restriction plate. Refer to chapter <i>8.3</i> and chapter <i>5.2.9</i> .
	Insufficient pressure of the gas supply.	Contact your gas supplier company
	The concentric system has a leak. The leak is possibly on the inside of the concentric flue.	Check the concentric flue system. Refer to the preparation manual for correct installation.
	There is no power supply (230 VAC).	Repair the power supply.
The appliance does not react on the remote control	The batteries of the remote control are empty.	Replace the batteries. Refer to the user manual.
The pilot burner stops to burn	There is insufficient exhaust of the flue gases.	Check the concentric flue system. Refer to the preparation manual for correct installation.
	The pilot burner is dirty.	Clean the pilot burner
	The pilot burner is defective.	Replace the pilot burner
	The thermocouple is defective	Replace the thermocouple
The light does not operate	The light bulb is defective	Replace the light bulb. See chapter <i>6.2.6</i> .
A loud noise occurs in the appliance	The overpressure door (= glass front) and overpressure hatch are activated.	Do a check on the appliance for problems.
The lacquer of the appliance is damaged		Use an aerosol can with heat resistant lacquer to repair any damage in the laquer.

10 Warranty Terms

Barbas Bellfires Warranty Terms

Barbas Bellfires B.V. guarantees the quality of the supplied Barbas appliance and the quality of the materials used. All Barbas appliances are developed and manufactured according to the highest possible quality standards. If, despite all this, something should prove amiss with the Barbas appliance you have purchased, Barbas Bellfires B.V. offers the following manufacturer's warranty.

Article 1: Warranty

- If Barbas Bellfires B.V. determines that the Barbas appliance you have purchased is defective as a result of a flaw in the construction or material, Barbas Bellfires B.V. guarantees to repair or replace the appliance free of charge, without charging any costs for labor or spare parts.
- 2. Repair or replacement of the Barbas appliance will be undertaken by Barbas Bellfires B.V. or by a Barbas dealer as designated by Barbas Bellfires B.V.
- 3. This warranty is supplementary to the existing legal national warranty of Barbas dealers and Barbas Bellfires B.V. in the country of purchase and is not intended to restrict your rights and claims based on the applicable legal provisions.

Article 2: Warranty conditions

- 1. Should you wish to claim under the warranty, please contact your Barbas dealer.
- 2. Complaints should be reported as quickly as possible after they have manifested themselves.
- Complaints will only be accepted if they are reported to the Barbas dealer, together
 with the serial number of the Barbas appliance which is stated on the front of the
 manual.
- 4. In addition, the original receipt (invoice, receipt, cash receipt) showing the date of purchase must also be submitted.
- Repairs and replacements during the warranty period do not give any entitlement to an extension of the warranty period. After a repair or replacement of warranty parts, the warranty period shall be deemed to have started on the date of purchasing the Barbas appliance.
- If a certain part is eligible for the warranty and the original part is no longer available, Barbas Bellfires B.V. shall ensure that an alternative part of at least the same quality shall be provided.

Article 3: Warranty exclusions

- 1. The warranty on the Barbas appliance ceases to be in effect if:
 - a. it is not installed according to the supplied installation instructions, and to national and/or local regulations;
 - b. it has been installed, connected or repaired by a non-Barbas dealer;
 - c. it has not be used or maintained according to the instructions for use;
 - d. it has been changed, neglected or roughly treated;
 - e. it has been damaged as a result of external causes (outside the appliance itself), for example, lightning strike, water damage or fire;
- 2. In addition, the warranty lapses if the original purchase receipt shows any change, deletion, removal or if it is illegible.

Warranty Terms barbas

Article 4: Warranty area

1. The warranty is only valid in those countries where Barbas appliances are sold through an official dealer network.

Article 5: Warranty period

- 1. This warranty will only be granted during the warranty period.
- 2. The body of the Barbas appliance is guaranteed for a period of 10 years against construction and/or material faults, starting from the moment of purchase.
- 3. For other parts of the Barbas appliance, a similar warranty applies from the moment of purchase for a period of two years.
- 4. For user parts such as glass, glass (cord) and the interior of the combustion chamber, a similar guarantee is given until after the first burning.

Article 6: Liability

- A claim granted by Barbas Bellfires B.V. under this warranty does not automatically imply that Barbas Bellfires B.V. also accepts liability for any possible damage. The liability of Barbas Bellfires B.V. never extends further than that stated in these warranty conditions. Any liability of Barbas Bellfires B.V. for consequential damage is expressly excluded.
- 2. That stated in this provision is not valid if and to the extent that is derives from a mandatory provision.
- All agreements entered into by Barbas Bellfires B.V. are, unless specifically stated
 otherwise in writing and to the extent that they are permitted based on applicable
 law, subject to the FME-CWM general sales and delivery conditions for the
 technology industry.
